The Connecticut Cottage.

The Board of Managers of the State of Connecticut desiring to place every facility in their power in the way of exhibitors, after careful consideration of the subject and notwithstanding the small appropriation at their command, decided to devote nearly one-third of the sum to the erection and fitting up of this cottage or building, which is especially designed for the use and convenience of Connecticut Exhibitors and visitors during the exhibition season.

This was the first State building completed on the grounds; its dimensions are thirty feet front by forty feet deep, with a wing or extension ten feet by twelve feet, a piazza ten feet by twenty feet, and a good sized old-fashioned porch leading into the main room, which is twenty-two feet by thirty feet, with a ceiling about seventeen feet high; three sides of this room are ornamented with a gallery. Leading from this main or reception room is a ladies' parlor and toilet room, a gentlemen's toilet room, a cloak, coat, hat and parcel room, and a private room and office for the managers and their agent. The inside wood work of this building consists chiefly of smoke-stained wood, and in the main room is a peculiar, old style fire-place and mantel. It has a shelf half a yard wide, at a height of about five feet from the floor, and about two feet above this first shelf is a second and narrower one, supported by two compound brackets resting on the lower one. Between the fire-place and the wood work are side pieces and a head piece of Connecticut brown stone. This stone work is surrounded by glazed Earthen Tiles which were made in New Haven especially for this purpose. The middle portion of the outside of the building is covered with scallop-fashioned shingles, the upper portion lathed and plastered, and the lower part weather-boarded. In the reception room, a book will be kept for Connecticut people to register their names in. This building will be found a great convenience to our people—it will be a rendezvous for social gatherings or meetings. A file of Connecticut papers will be kept there, and a bulletin of information, where items of interest to visitors and exhibitors, will be posted; a place where parcels or articles of clothing, or purchases may be left or sent to for safe keeping; a Post office to which correspondence for exhibitors or visitors may be sent. In fact this cottage shall be, as far as is possible to make it a place where Connecticut people will feel at home.

Tickets, entitling the holder to the privileges of the Cottage, may be obtained from any member of the Board of Managers.

Articles Loaned or Provided,

This Catalogue

is published for the use of those who are especially interested in Connecticut and her exhibits at the Centennial Exhibition. It is issued as a *Guide-Catalogue*, and contains an alphabetical list of exhibitors with the address of each, and a description of articles exhibited. The registered number of each exhibitor. The building in which the exhibit may be found, and the column near which it is located. It also contains a complete list of Connecticut exhibits, classified according to the business represented, and a list of exhibits by towns. Connecticut sends to this Exhibition a total of about three hundred and ninety-four exhibits distributed as follows:

In the Main Building, - - - -	163
In the Machinery Department, - - -	74
In the Agricultural Department, - -	21
In the Art Department, - - - -	4
In the Government Building, - - -	43
In the Women's Department, - - -	66
In the Annexes and Grounds, - - -	23

At the last International Exhibition, (Vienna 1873) the exhibits from Connecticut were of such a character that her exhibitors received a larger number of awards in proportion to the number of exhibits than any other State or nation. Her contributions to the Centennial are of a still higher grade, and much greater variety, and although surrounded by the products of art and industry from larger and more populous sister States, Connecticut will be found occupying as honorable a position in the front rank, as she did one hundred years ago.

FOR ALL KINDS OF STITCHING, THE

"FAVORITE"

Excels all other

SEWING MACHINES.

The peculiarities are, Simplicity of Construction, Adaptability to Requirements, Superiority of Manufacture, Convenience of Handling, Tremendous Durability.

TRADE MARK.

Recent improvements render both the

Family and the Manufacturing Machines

Better than ever before, and not another machine can stand in competition with them—yet, our motto is

EXCELSIOR!

The "Putnam" and other Relics at the "Cottage."

Since the opening of the exhibition the Connecticut Cottage, although the smallest State Building on the grounds, has been an object of much interest to visitors. It is considered by a great majority as having more characteristic features, and as being better adapted for its requirements than many of the more pretending State Buildings. Every article in it, with few exceptions, has not only been sent from Connecticut, but most of them are of historical interest. Among the latter are several relics formerly owned by General Putnam. In addition to the fine Portrait, and the "Queen's Arm," mentioned on page 6. Since that list was printed, Major Lewis J. P. Putnam, of Washington County, Ohio, has visited the Cottage, and has kindly loaned a Silver Mounted Cane, formerly owned by his great grand father General Putnam. We have also just received from another great grandson, Israel Waldo Putnam, a pair of Pistols and Holsters, Powder Horn, Bullet Mould, and Magnet, all of which did good service in the last century for the benefit of this.

The Connecticut Historical Society has also loaned, at the request of Governor Ingersoll, a relic of great interest. It is the "Royal Arms" which before the Revolution hung above the Speaker's Chair, in the House of Representatives at Hartford, and was probably painted about the year 1724.

These, and other articles of interest, make the "Cottage" a very desirable place in which to spend a short time.

It is especially requested that residents of Connecticut make themselves known as such on visiting the "Cottage."

A HANDSOME WATER COOLER.

One of the largest and handsomest Water Coolers ever made, has just been sent to the Cottage by the Simpson, Hall & Miller company of Wallingford. It is of britannia, silver-plated, and is intended for use in the State Capitol in Hartford, but has been loaned to the Cottage until the close of the Exhibition. The design is something after the old Grecian temple style. The circumference of the base is 7 feet, of the body 4½ feet, entire height 5 feet, and it will hold 20 gallons. Encircling the edge of the base is a dragon border. On the top edge of the body, around the outside, are placed eight columns and two faucets, also four gilt images representing "Harvest." The whole is surmounted by an elegant gilt statue of Columbus. The cooler is formed of three joints, the figures being so made as to admit of their being taken off. The weight is estimated at 200 pounds, and cost $1,000.

While drawing the attention of our Connecticut friends to the fine portrait of General Putnam at the "Cottage." We would also direct them to a painting of still more national interest. It is one of the British loan collection, and has been exhibited until now in one of the "Loan Collection" rooms, but has just been removed to a still better and more appropriate location on the left wall of the Dome, in Memorial Hall.

It is a full-length portrait of Washington, by Stuart, painted from life at Philadelphia, in 1796, for Mrs. William Bingham, and by her presented to the Marquis of Lansdowne as a token of gratitude for the friendly part he had taken in our Revolutionary troubles. At the death of the Marquis his personal property, owing to the embarrassment of his affairs, had to be sold, and this picture was bought by Samuel Williams, an eminent American merchant then established in London, who paid for it *two thousand guineas* under the hammer. At the instance of one of our oldest citizens it has been kindly loaned to grace our grand Centennial Exhibition by its present proprietor. The historical value of this picture may be estimated from the fact that Mr. Sartain, director of the Art Department, now holds the original letter of General Washington to Mr. Stuart respecting the time and place at which he was to sit for it, dated "11th April, 1796," to which is appended a certificate by Mr. Stuart, written in 1823, that, *with the exception of the head on a large canvas* (which is now owned by the Boston Athenæum), *this was the only portrait painted by him of Washington from life, in existence.* We may add that, as it was executed at the height of his fame by the greatest portrait painter of his day, it is in his best style, and that it is in perfect condition.

CORNELL & SHELTON,

BIRMINGHAM, CONN.,

Manufacturers of

Patent Folding Paper Boxes,

This box is made from one piece of paper, can be printed upon in the blank, saving all labeling. Folding flat it economizes in transportation and storage. It is adapted to putting up Proprietary goods, Bottles, Screws, Tacks, and other small articles of hardware. Confectionery, Ice Cream, Oysters, Groceries, and Samples.

We are prepared to Sell Patent Rights

and furnish machinery for manufacturing these boxes under our patents, and can show a saving in the use of them over any box in the market.

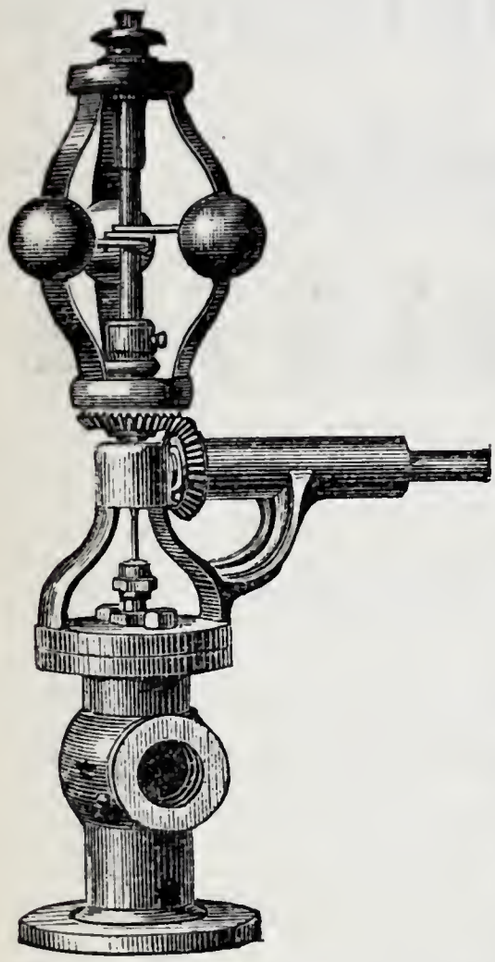
PICKERING'S PATENT Steam Engine Governor,

Patented October, 1862, and October, 1865.



This GOVERNOR has been in constant use for the past twelve years, and when we say that our first customers still continue its use, we present a very evident proof of its efficiency, not considering it necessary to underate the qualities of other good Governors.

It has always received the highest award whenever exhibited in competition with other Governors, not only in the United States, but at the Paris Exposition of 1867 where two special Medals were awarded its inventor by the Imperial Commission, in addition to the Medal awarded by the International Jury. So, also at the Vienna World's Exhibition in 1873, where the International Jury awarded this Governor the Grand Medal of Progress, the Emperor of Austria conferred on its inventor the decoration of the Knights' Cross of the order of Francis Joseph.

This Governor is offered etirely on its own merits. Its price is as low as that of any other good Governor. Having no joints, it is extremely sensitive. Its durability is beyond question; its economy in fuel has been fully proved.

FOR SALE BY THE LEADING DEALERS EVERYWHERE.

This elegant Garter surpasses, in beauty and comfort, anything of the kind ever worn. It is made of a double row of spiral spring wire, heavily plated with silver and gold, and so arranged as not to impede the free circulation of the blood, thus ensuring warm feet, while it leaves the limbs quite unmarked. The invaluable qualities which are attributed to the Ventilated Spring Garter have gained for it the entire confidence of the most eminent members of the medical profession; and it is emphatically pronounced the only Garter fit to be worn by invalids. Manufactured by F. Armstrong, Bridgeport, Conn., U. S. Terms free on application.

NOTICE.—We copy the following certificate from F. Humphreys, M.D., late Professor in the Medical College of Pennsylvania, at Philadelphia:

The Duplex ventilated Garters, manufactured by F. Armstrong, Bridgeport, Conn., are, in my opinion, the only Garters that do not impede the circulation of the blood and that can be worn with perfect safety and comfort. In a practice of thirty years I have seen nothing so admirably adapted to the purpose as these Garters and Armlets.

Yours, &c.,

F. HUMPHREYS, M. D.

562 Broadway, New York, May 1, 1874.

List of Special Improvements applied to

ELECTRO-PLATED GOODS,

EXCLUSIVELY BY THE

MERIDEN BRITANNIA CO.

The Meriden Britannia Company's Sectional Electro-Plated Nickel Silver Spoons and Forks, stamped with the Trade-Mark

1847. ROGERS BROTHERS. XII.

The Meriden Britannia Company's Porcelain-Lined Silver Plated Icewater Pitcher, Ice Urns, Table Service, and Baking Dishes.

Silver Plated Baking Dishes, and Table Service Dishes with Double Walls and Detached Porcelain-Covered Lining.

The Meriden Britannia Company desire to call especial attention to their NEW HARD WHITE METAL WITH A SILVER RING or resonance, now manufactured by them under Silliman's Patent.

The process by which this new product of manufacture is produced, imparts to the goods made by it a greatly increased elasticity and strength, the stiffness being increased at fifty (50) per cent. over any former product of white metal alloys.

These goods have a clear metallic ring, and resound when struck like solid silver wear.

SILLIMAN'S PATENT METAL

Bears This

Trade-Mark

In addition to our usual Trade-Mark.

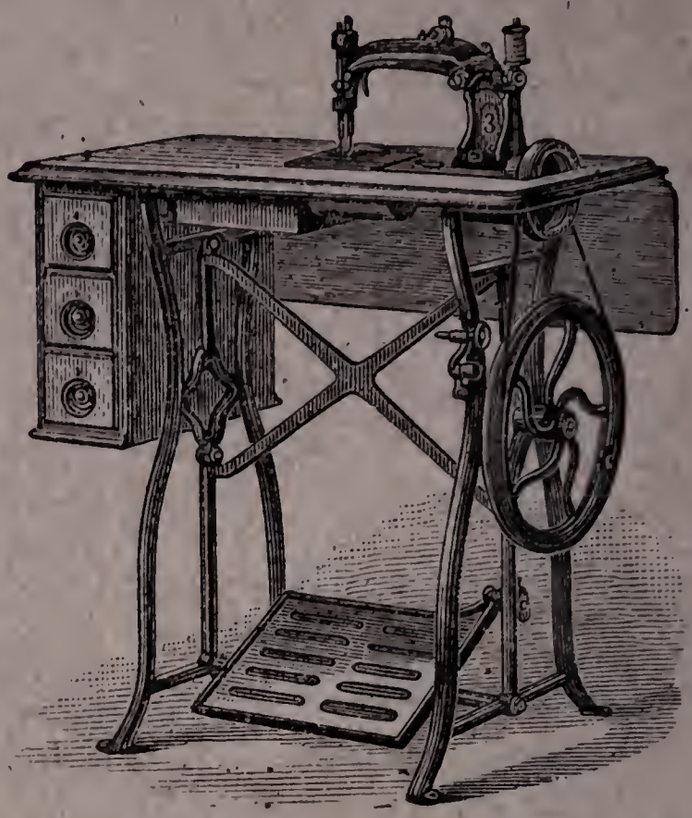
The above goods, and other specialties may be examined during the exhibition at the Company's Pavilion, at N. 44, Main Aisle of the Main Building.

WHEELER & WILSON'S

NEW STRAIGHT NEEDLE ROTARY-HOOK LOCK STITCH

Sewing Machines

Nos. 6, FOR FAMILY USE (No. 8 Machine.)



7 and 8, AND MANUFACTURING.

The *New System* of the *WHEELER & WILSON SEWING MACHINE* was first exhibited at the World's Fair, Vienna, 1873, and the Austrian Official Report pronounced it "*The Marvel of the Exposition.*"

The same year the judges of the American Institute, New York, reported "it is a decided improvement over all other machines in the market. This Machine fully merits the *Grand Medal of Honor.*"

In 1874 the five judges of the American Institute unanimously recommended it for "*the highest award which it is in the power of the Institute to bestow.*"

In 1875 special and unusually accomplished experts were appointed by the American Institute as judges of Sewing Machines, consisting of CHAS. W. EMERY, Consulting Engineer, U. S. Revenue Marine; GEO. W. MAGEE, Passed Asst. Engineer, U. S. Navy; J. V. VAN DOREN, Chief of Drafting Department, U. S. Navy Yard, Brooklyn, N. Y. They "*unanimously recommended that the Great Medal of the American Institute be awarded to the Exhibitors, WHEELER & WILSON M'F'G CO.*"

The points of difference and superiority of this Machine over the Shuttle Machines are very numerous and important.

1st. The rotating motion of the hook is far easier, quieter and more rapid than the reciprocating motion of the shuttle.

2d. A much higher speed is attainable with the rotating hook than with the reciprocating shuttle. This is very desirable when steam power is to be used, as the Rotating Hook can be made to do at least 50 per cent more work than the Shuttle Machine. The ordinary speed at which the No. 8 can be run, say 1,200 stitches a minute, would soon shake a Shuttle Machine to pieces.

3d. The repairs required by the Rotating Hook Machine are very light compared with those of the Shuttle Machine.

4th. The automatic tension or clamping of the lower thread enables the operator to regulate the lock of the two threads, as can be done with no Shuttle Machine.

5th. The independent "take up" to draw up the thread when the needle is out of the material, is found in no Shuttle Machine.

6th. The steady movement of the Rotating Hook produces a more regular and even stitch than the reciprocating shuttle.

7th. The under thread is much more easily wound and arranged than with the Shuttle Machine, and the bobbin requires refilling far less often. The needle is set without trouble by simply placing it in position.

These machines are working in Machinery Hall and in the Shoe and Leather Department. Office, No. 44 Fourteenth Street, Union Square, New York.
